Prompt : Draft a professional email requesting a meeting

Output:

Tabnine

Tabnine's Enterprise Context Engine is what makes AI coding truly enterprise-ready. Instead of guessing from generic training data, it learns your organization's unique architecture, frameworks, and coding standards. It adapts to your mixed stacks and legacy systems, ensuring every suggestion aligns with your security, compliance, and performance requirements. By embedding enterprise knowledge directly into the coding experience, Tabnine transforms AI from a novelty into a governed, context-aware teammate that codes the way your enterprise works.

Wrike AI

What is Wrike used for?

AI Overview

Wrike is a robust enterprise work management and project management platform designed to help teams plan, track, and collaborate on projects in a single, centralized workspace. It is commonly used to **automate workflows, manage resources, and align daily tasks with broader business goals**.  Wrike +2

Teams across various industries use Wrike for several core functions:

- **Project and Task Management:** Break large projects into manageable tasks, assign them to team members, set deadlines, and map out timelines using interactive Gantt charts and Kanban boards.  YouTube · LearnWrike +1

Fire flies

Sales / Kickoff Call - Fireflies.ai x Acme 

Kickoff Call – Fireflies.ai x Acme 

 Sarah Watts, +3 Mar 15 · 11:30 AM

 Sales Notes  

Overview

The kickoff call served as an introduction between Fireflies.ai and Acme Inc. They aim to use Fireflies.ai primarily to streamline internal communications, automate sales call follow-ups, and improve meeting workflows.

Notes

- Use Case & Requirements: 00:00 – 10:12
 - Acme wants their sales team more present during calls
 - They want to automate data entry in HubSpot CRM
 - Team managers want to use Fireflies to provide call coaching
- Metrics & Goals: 10:15 – 20:43

Input: ? Create a captivating opening for a story.

Output:

The orange peel lay on the counter in a tight curl, like a creature that had died in the act of trying to escape. James picked it up by its brittle edge and dropped it into the compost bin. It made a sound that was exactly what you would expect an orange peel to make hitting other compost: nothing remarkable, nothing worth noticing. He noticed anyway, because it was 6:17 on a Tuesday morning and the noticing was the only thing that separated him from the wallpaper.

He rinsed his hands under water that was colder than it had any right to be. The apartment's plumbing had a personality disorder—hot water appeared randomly, as if the building itself couldn't commit to generosity. He dried his hands on a dish towel that smelled like the ghost of garlic and watched his reflection in the microwave door. The reflection was not flattering. His face looked like something that had been folded too many times, creased in all the wrong places. Thirty-four years old and already his skin had given up the pretense of youth.

The coffee machine gargled and spat. James poured the coffee into a mug that read "World's Okayest Uncle," a gift from his sister's kids that was both affectionate and brutally honest. The coffee was too strong. He drank it anyway. Strong coffee made him feel like he was doing something difficult, which was better than feeling like he was doing nothing at all.

Outside the kitchen window, the world was still deciding whether to wake up. A delivery truck idled at the curb, its engine muttering. A woman walked a dog that appeared to be

made entirely of knees and anxiety. The sky was the color of a dirty bath. James stood at the window and watched until the coffee was gone and his fingers had gone numb around the mug.

His phone sat on the counter, face-down, as if ashamed of itself. James picked it up and checked the screen. No messages, no missed calls. The lock screen showed a photo of his parents' old cat, a creature so uniformly gray it looked like it had been photocopied. He put the phone back down. The silence of the apartment pressed against his ears.

The routine was simple and had been for years. Shower, dress, coffee, out the door by seven. Work at the accounting firm until six. Home, dinner (something assembled, not cooked), television until his eyes burned, bed. On Fridays, he called his sister. On Sundays, he did laundry. The routine was not exciting. The routine was not meant to be exciting. The routine was meant to be reliable, and it was, which was both its greatest virtue and its most damning flaw.

He was pulling a clean shirt from the closet when the phone rang.

The sound was so unexpected that James dropped the shirt. It landed on the floor with a soft sound of surrender. He stared at the phone for three rings before picking it up. The caller ID said "Mom," which was impossible because his mother had been dead for eleven months and thirteen days. He knew the number by heart, had dialed it so many times in the weeks after the funeral that the digits had worn a groove in his thumb. The phone kept ringing. His finger hovered over the screen.

He answered.

"Hello?"

There was a pause, the kind that suggested someone on the other end was surprised to have been answered. Then a voice, female, not his mother's.

"James? James Harlow?"

"Yes." His voice came out smaller than he'd intended.

"This is Dr. Chen from Westlake Hospital. I'm calling about your father."

James sat down on the edge of the bed. The mattress sighed beneath him. "What about him?"

"He's had a fall. Nothing serious, but we'd like someone to come pick him up. He's insisting on leaving, and frankly, we'd feel better if he weren't alone tonight."

"My father," James said, as if testing the words for authenticity, "is in a care facility in Bridgewater. Has been for two years."

Another pause. When Dr. Chen spoke again, her voice had the careful modulation of someone stepping around broken glass. “Mr. Harlow, your father was brought in this morning. According to the paramedics, he was found on the sidewalk outside a bar on Delancey Street. He was coherent enough to give us your number, but he’s been... confused. About some details.”

James closed his eyes. The room tilted slightly, though he was sitting perfectly still. “Which bar?”

“The Rusty Anchor.”

“I’ll be there in twenty minutes.”

He hung up without waiting for a response. The shirt was still on the floor. He picked it up, brushed it off, and put it on. His hands moved through the buttons with the efficiency of habit, but his mind was somewhere else, racing down alleys of possibility, each one darker than the last. His father, in a bar. His father, who hadn’t left the care facility grounds in two years. His father, who sometimes called him by his mother’s name and sometimes didn’t call him anything at all.

The drive to Westlake took eighteen minutes. James drove with the radio off, his hands at ten and two on the wheel, his speed exactly five miles per hour above the limit. Not fast enough to attract attention, not slow enough to prolong the journey. The streets were still quiet, the morning traffic not yet fully formed. He passed a school bus loading children who looked too small to be awake, their backpacks enormous on their frames. He passed a man hosing down the sidewalk in front of a closed bakery. The world continued its indifferent rotation.

Westlake Hospital sat on a hill that the city planners had apparently included as a joke. James parked in the visitor lot and walked up the entrance ramp, his shoes squeaking on the wet concrete. The automatic doors parted for him with a pneumatic sigh, and the smell hit him immediately: antiseptic and industrial air freshener, undercut by something less definable, something human and afraid.

The woman at the front desk had hair pulled back so tightly it stretched the skin around her eyes. She looked up at James with the expression of someone who had been interrupted in the middle of a very important thought about something unrelated to her job.

“I’m here for Richard Harlow,” James said.

She typed. The keyboard made a sound like popcorn. “Room 112. Down the hall, left at the water fountain.”

“Thank you.”

“The water fountain is broken,” she added, as if this were relevant information he should have.

Room 112 was at the end of a corridor lined with identical doors. The walls were the color of mint that had gone bad. A cart of medical supplies sat abandoned outside one room, its contents spilling over like the guts of a eviscerated machine. James walked past it, his footsteps echoing in the empty hallway.

The door to 112 was slightly ajar. James pushed it open.

His father sat on the edge of a hospital bed, fully dressed in a shirt that James didn’t recognize and pants that had a stain on one knee. His shoes were on the floor, unlaced. He was staring at the wall with the focused intensity of a man trying to read very small print from a great distance. He looked smaller than James remembered, as if the two years had sanded him down, worn away the edges until what remained was something softer and more uncertain.

“Dad.”

Richard Harlow turned. His eyes took a moment to find James, to adjust, to recognize. When they did, something flickered across his face—not quite a smile, not quite a frown, but a rearrangement of features that suggested he was trying to place James in a category that made sense.

“James.” His voice was rough, as if he’d been shouting, though James couldn’t imagine when or why. “They called you.”

“They did.”

“I told them not to.” Richard looked down at his hands, which were resting on his knees. The skin was mottled with age spots, the knuckles swollen. “I’m fine. It was nothing. A stumble.”

“A stumble that landed you in the hospital.”

“I’ve had worse.” This was true. Richard Harlow had broken his collarbone falling off a ladder at sixty-two, had sliced his hand open on a saw at sixty-five, had survived a heart attack at sixty-eight with nothing but aspirin and stubbornness. The body was, to him, a poorly designed vehicle that he was determined to drive into the ground.

James pulled the room’s only chair closer to the bed and sat. The plastic seat was cold through his pants. “What were you doing at a bar on Delancey Street at six in the morning?”

His father’s expression didn’t change, but something behind his eyes shifted, like furniture being rearranged in a dark room. “I went for a walk.”

“The care facility is twelve miles from Delancey Street.”

“I’m aware of where I live, James.”

“Then how did you get there?”

Richard looked at the wall again. His profile was sharp against the fluorescents, all angles and shadows. “I took a bus.”

“There are no buses that run from Bridgewater to the city at that hour.”

“Then I walked.”

“You walked twelve miles.”

“If you already know all the answers,” Richard said, his voice tightening, “why are you asking the questions?”

James felt the familiar pressure behind his sternum, the compressed feeling of a conversation turning into an argument before it had properly begun. He took a breath. “I’m asking because I’m concerned. You’re supposed to be at Maple Ridge. They have rules, protocols. They’re probably losing their minds right now.”

“Let them lose their minds. Small minds, small loss.”

A nurse appeared in the doorway, a clipboard clutched to her chest like a shield. She was young, with a nose ring that caught the light when she moved. “Mr. Harlow? We have your discharge papers ready. Just need a signature.”

Richard reached for the clipboard. His hand shook slightly. James watched as his father signed his name in a handwriting that had grown loose and wandering, the letters drifting apart like boats unmoored.

“Will someone be staying with him tonight?” the nurse asked, looking at James.

“Yes,” James said, before he had decided to say it.

The nurse nodded, satisfied, and left. Richard was putting on his shoes, his movements slow and deliberate. He had always been a man who took his time with things—eating, speaking, deciding. Age had only exaggerated this quality, turning deliberation into something that bordered on performance.

“I don’t need a babysitter,” Richard said, without looking up.

“I know.”

“Then why did you tell her that?”

“Because you fell. Because you’re confused. Because someone should be there.”

Richard finished with his laces and stood. He was steady on his feet, which was something. He picked up a jacket from the chair—not his jacket, James realized, but

one that belonged to the hospital, generic and blue. “I’m not confused,” he said. “I know exactly what I’m doing.”

“What are you doing, Dad?”

Richard looked at his son. For a moment, his eyes were clear, focused, present in a way they hadn’t been in months. “I’m going home,” he said.

The drive back to James’s apartment was silent. Richard sat in the passenger seat with his hands folded in his lap, looking out the window at a city he had lived in for seventy years and now seemed to regard as a mildly interesting foreign country. James kept his eyes on the road and his thoughts to himself. The radio remained off. The morning had fully arrived now, traffic thickening, pedestrians moving with purpose on the sidewalks. Life, continuing.

At a red light, Richard spoke.

“Your mother would have hated that hospital.”

James’s hands tightened on the wheel. “Yeah.”

“The color of the walls. She had opinions about colors.”

“She had opinions about everything.”

Richard almost smiled. It was there and then gone, a brief disturbance in the weather of his face. “She did. God, she did.”

The light changed. James drove.

His apartment felt smaller with his father in it. Richard stood in the doorway for a long moment, taking inventory. The living room with its secondhand furniture. The bookshelf filled with paperbacks James had inherited and never read. The kitchen visible through an archway, counters cluttered with the evidence of a life lived in increments.

“Nice place,” Richard said, which was either kindness or a symptom of his condition.

“Thanks.” James took his father’s jacket—the hospital’s jacket—and hung it on a hook by the door. “You hungry? I can make eggs.”

“I’m not hungry.”

“Toast, then.”

“James.” Richard turned to face him. He looked tired suddenly, the clarity from the hospital room replaced by something more familiar, a fog settling back in. “I don’t want food. I want to know why you’re not asking me the real question.”

James waited.

“Why was I at that bar?” Richard’s voice had gone quiet, almost gentle. “That’s what you want to know. Not how I got there. Why.”

“Okay.” James crossed his arms. “Why were you at that bar?”

“Because that’s where I met your mother.” Richard moved past him, into the apartment, and sat down on the couch. The cushions accepted his weight with a sound of resignation. “Fifty-three years ago. She was working behind the bar. I ordered a whiskey I couldn’t afford and she called me on it. Said I looked like the kind of man who ordered things he couldn’t afford.” He looked up at James. “She was right. I’ve been doing it my whole life.”

James stood in the middle of the living room, his arms still crossed, and felt something complicated rise in his chest. Not quite anger, not quite sadness, but a hybrid emotion for which he had no name. His father, lost and found and lost again, sitting on a couch that smelled like cat and yesterday’s dinner, talking about a woman who had been dead for almost a year as if she might walk through the door at any moment.

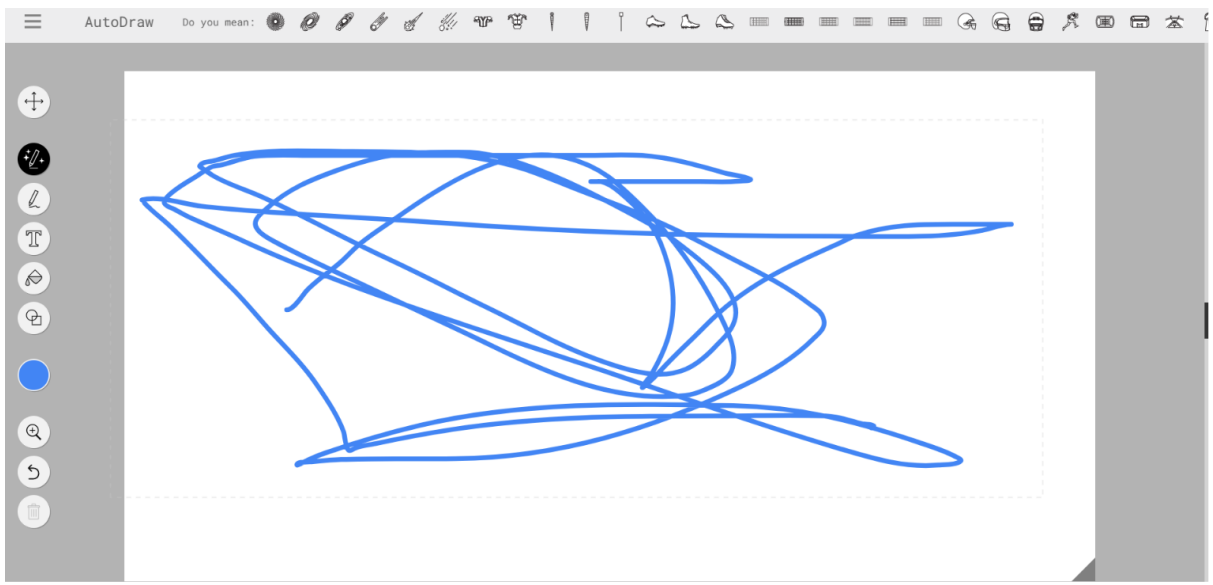

“I need to call Maple Ridge,” James said. “Let them know you’re safe.”

“Call them.” Richard leaned back, his eyes already drifting toward the window, toward whatever private geography his mind was mapping. “Tell them I’ll be back tomorrow. Or the next day. Tell them not to worry.”

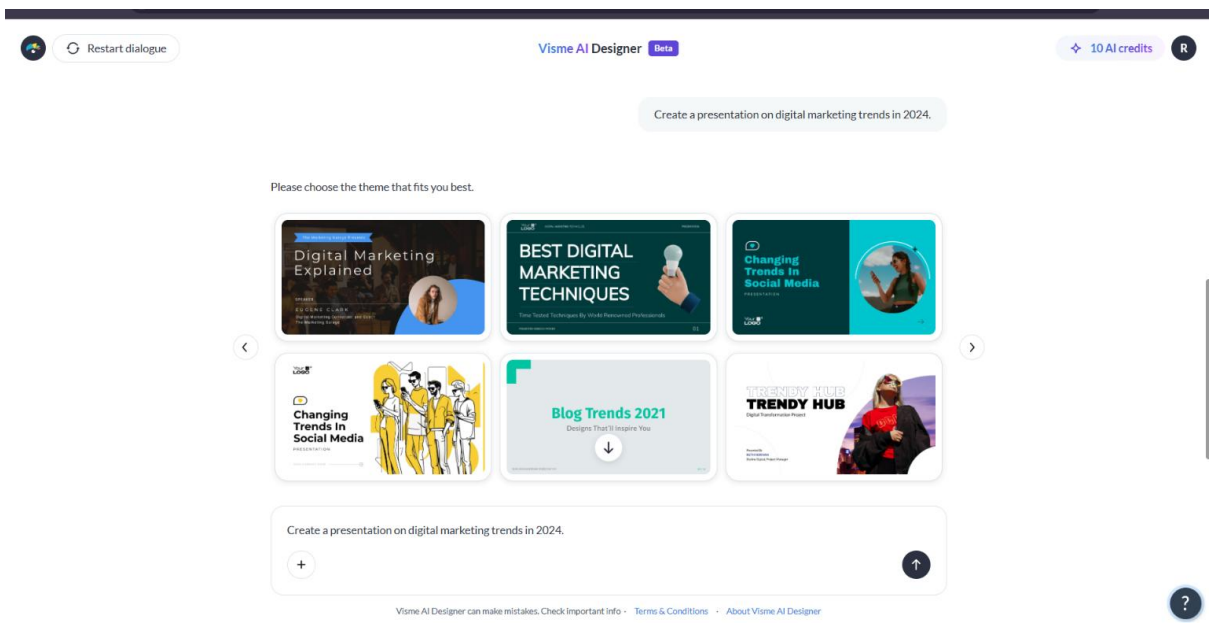

James picked up his phone. He didn’t dial. He stood there, watching his father’s profile against the morning light, and wondered, not for the first time and certainly not for the last, what it meant to love someone who was already halfway gone.

Outside, a siren wailed briefly and fell silent. The day settled into its rhythms. Somewhere in the building, a neighbor’s shower ran. The faucet in James’s kitchen dripped, a metronome keeping time for no one. Richard’s eyes closed. His breathing deepened. James put the phone down and went to make coffee, for both of them this time, and when he returned with two mugs, his father was asleep on the couch, one hand curled against his chest like a question he had been carrying for years.
